

eAlarmDirect

eAlarmDirect – the ideal combination with your alarm system

As a customer, you use various alarm systems to monitor buildings. These include fire alarm, burglar alarm, sprinkler and automatic fire extinguishing systems.

eAlarmDirect allows you to automatically alert the responsible persons and inform them in the event of the triggering of such an alarm system. Linking the alarm system to eAlarm emergency allows alerts to be sent efficiently, and actively solve an emergency situation.

What is eAlarmDirect?

The individual alarm systems are connected to control centres respectively alert receiving stations via the existing redundant transmission network. The linking of the individual alarm criteria allows direct and simultaneous alerting of the required persons via eAlarm emergency.

Your benefits

With eAlarmDirect

- > you can alert and inform your operating and standby personnel at the same time should an alarm be triggered from an alarm system.
- > you can select which group of people is to be alerted for each alarm criterion.
- > you can amend the personal data and alert medium of the alert recipient in eAlarm emergency at any time and from any location.
- > you do not need to install complex cable connections or additional transmission equipment between the alarm system and eAlarm emergency.

With eAlarmDirect, you receive the alarm information at the same time as fire department, police force and private control centres.

The solution at a glance.
