eAlarmStarter

eAlarmStarter – the simple alarm solution for when you're on the go

eAlarmStarter is the optimal addition to eAlarm emergency: the alarm objects prepared in eAlarm emergency can be triggered in eAlarmStarter at the push of a button.
eAlarmStarter is optimised for mobile use for when you're on the go and is thus ideal for devices such as smartphones, tablets, laptops and even desktops. The simplicity of the alarm system is one of its key features, making it easy for even less experienced users to quickly trigger the correct alarm object.

What is eAlarmStarter?
eAlarmStarter is a web application that ensures synchronisation with eAlarm emergency through a SOAP interface. The alarm objects recorded in eAlarm emergency are synchronized daily with eAlarmStarter so the data in both systems always have the same status. The alarms or telephone conferences initiated in eAlarmStarter are automatically transmitted to eAlarm emergency and from there to the alarm recipients.

Your benefits
with eAlarmStarter

> Benefit from a responsive web application that is optimised for easy mobile use on the go
> Alert prepared alarm objects quickly and intuitively at the push of a button
> You can configure ad hoc alarms by individually compiling the groups and alarm recipients to be alerted
> You receive the alarm feedback quickly and clearly displayed
> Define which service user is authorised for which alarm objects; only the designated service user will be able to see the corresponding alarm objects and trigger them when necessary

With eAlarmStarter, you can trigger alarms and telephone conferences in the easiest possible way – any time and from anywhere.

The solution at a glance.
